

CLAIMS

What is claimed is:

1. A blank for a multi-sided container for crustaceans, comprising:
 - a) a base member;
 - b) one or more thermal conditioning wall members foldably connected to said base;
 - c) one or more infiltration barrier wall members foldably connected to said base opposite said thermal conditioning wall member or members, said thermal conditioning wall member or members and said infiltration wall member or members having partial side wall members extending substantially orthogonally therefrom in an aligned relationship whereby said thermal conditioning wall member or members and said infiltration barrier wall member or members can be folded to bring their partial side wall members into contact thereby forming one or more multi-sided containers for live crustaceans.
2. A blank of Claim 1 wherein said partial side wall members have means for locking the blank in its folded position.
3. A blank of Claim 1 wherein said base member has a plurality of thermal conditioning wall members and a plurality of infiltration barrier wall members foldably attached so that a plurality of crustacean containers is formed when said members are folded into position.
4. A container formed from the blank of Claim 1.
5. A container formed from the blank of Claim 3.
